

SG, ZSG, SBK Series Three-phase Dry-type Transformers

Summary

SG series dry transformer is refer to seimens company same product empoldered and produced digital control system use's transformer, especially 160va-16kva three phase dry transformer it's overall and intall dimension has standardized offer seimens 4ap series in common use, the producte accord with VED0550, IEC439, JB5555, GB5226 etc, international standard and national standard

SG series three-coherent-type transformers are widely in AC50~60Hz, input、 output voltage not exceeding 1000V three-phase power supply a variety of occasions , products, a variety of input and output voltage level , join groups , regulating the number and location of taps (typically \pm %) 、winding capacity allocation, single-phase secondary winding is equipped with, the use of rectifier circuits, is ask to take shell, etc, can be based on the user's demands meticulous design and manufacture.

ZSG series three-coherent-type rectifier transformer for the rectifier devices, made after charging rectifier, voltage regulator and the DC power supply purposes.

Outline and installation dimension
